

DRAPER®

StageScreen

A revolutionary new projection screen by Draper.

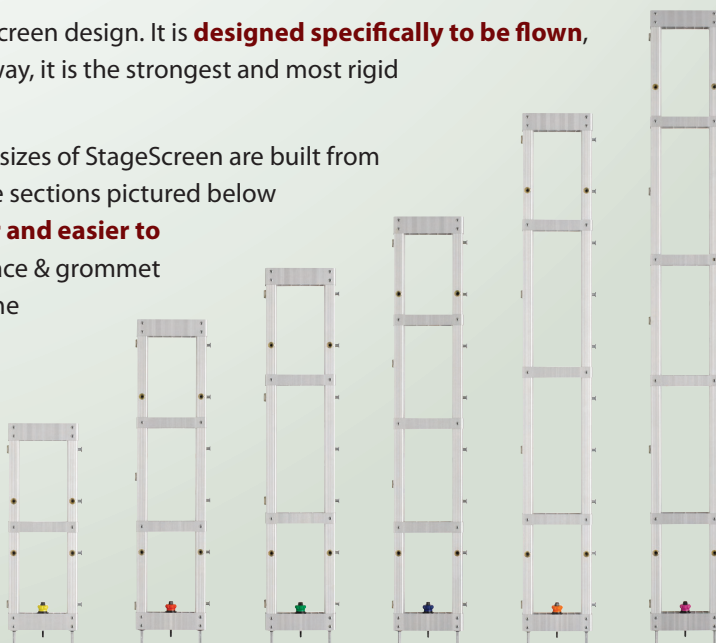

BORN TO FLY.

The StageScreen is a totally new concept in projection screen design. It is **designed specifically to be flown**, but can also be wall mounted or used with legs. Either way, it is the strongest and most rigid screen on the market.

The 8" truss frame is **completely modular**. All available sizes of StageScreen are built from combinations of the same 6 standard color-coded frame sections pictured below (including optional legs). This makes StageScreen **faster and easier to assemble** than a comparable truss folding screen or a lace & grommet screen. In addition, if a frame section should ever become damaged you can replace it in seconds without tools.

The modular StageScreen frame is **over 60% stronger** than a truss folding screen frame. It is engineered to hold tolerance after repeated usage.

Color-coded frame sections simplify assembly. You are always certain that you are using the right piece. Simply follow the instructions included with your StageScreen.

Fast and easy assembly

StageScreen can be assembled on average in about half the time of a comparable truss folding screen.

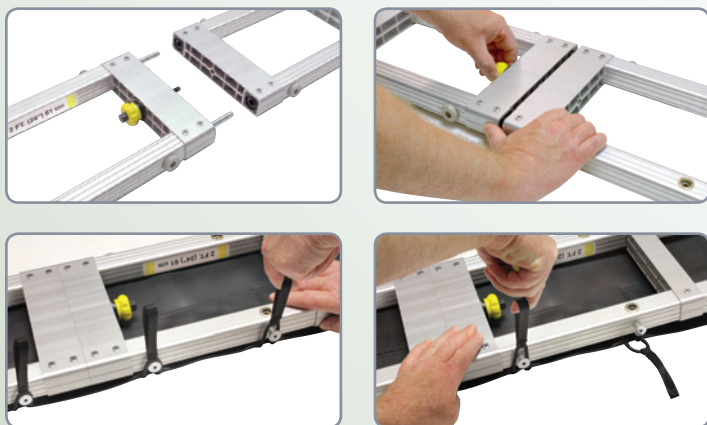

No hinges, no snaps, and no Handy Cranks are involved. Frame sections are connected with permanently attached threaded links and guide pins. Easy to follow color-coded assembly instructions are included with each StageScreen.

Revolutionary new viewing surface attachment

The viewing surface attaches with a revolutionary new fast and easy method. Using the attached **DuraLoop™** bungee cord loops with handy nylon pull-tabs, simply hook the surface to the posts on the frame. DuraLoops are longer lasting than traditional snaps, and provide even self-centering tension for the viewing surface. You'll never want to use snaps again.

Viewing surfaces

The viewing surface is stretched perfectly flat, resulting in the highest picture quality. Standard viewing surfaces include **Black-Backed M1300**—The perfect Matt White diffusing surface; or **Cineflex**—A neutral grey for rear projection.

Standard Sizes

StageScreen offers **exact true formats** in 33 standard sizes up to 30' x 40'. Call for custom sizes. Silver anodized frame is standard (black anodized optional).
